

## Algebra II Worksheet #5 Unit 11 Selected Solutions

Solve for x. Express irrational solutions rounded to the nearest hundredth.

$$\begin{aligned}
 1. \quad & 4^{(x-3)} = 32 \\
 & (2^2)^{(x-3)} = 2^5 \\
 & 2^{(2x-6)} = 2^5 \\
 & 2x - 6 = 5 \\
 & 2x = 11 \\
 & x = 5.5
 \end{aligned}$$

$$\begin{aligned}
 4. \quad & 3^{(2x-1)} = 75 \\
 & \text{Log}(3^{(2x-1)}) = \text{Log } 75 \\
 & (2x-1)\text{Log } 3 = \text{Log } 75 \\
 & 2x\text{Log } 3 - \text{Log } 3 = \text{Log } 75 \\
 & 2x\text{Log } 3 = \text{Log } 75 + \text{Log } 3 \\
 & x = \frac{\text{Log } 75 + \text{Log } 3}{2\text{Log } 3} \approx 2.46
 \end{aligned}$$

$$\begin{aligned}
 5. \quad & \text{Log}_3 x = 2 \\
 & x = 3^2 \\
 & x = 9
 \end{aligned}$$

$$\begin{aligned}
 9. \quad & \text{Log}_2 x = 2.75 \\
 & x = 2^{2.75} \approx 6.73
 \end{aligned}$$

11. \$1000 is invested in an account that pays interest at an annual rate of 6% compounded monthly. How long will it take for the value of the account to double?

$$\begin{aligned}
 A &= P\left(1 + \frac{R}{N}\right)^{Nt} \\
 A &= \$2000 & 2000 &= 1000\left(1 + \frac{0.06}{12}\right)^{12t} \\
 P &= \$1000 & 1.005^{12t} &= 2 \\
 R &= 0.06 & 12t\text{Log } 1.005 &= \text{Log } 2 \\
 N &= 12 & t &= \frac{\text{Log } 2}{12\text{Log } 1.005} \approx 5.4 \\
 t &= ??
 \end{aligned}$$

**It will take about 5.4 years.**

13. \$600 is invested in an account that pays interest at an annual rate of 7% compounded continuously. How long will it take for the value of the account to double?

$$\begin{aligned}
 A &= Pe^{Rt} & 1200 &= 600e^{0.07t} \\
 A &= \$1200 & e^{0.07t} &= 2 \\
 P &= \$600 & 0.07t &= \ln 2 \\
 R &= 0.07 & t &= (\ln 2) \div 0.07 \approx 9.9 \\
 t &= ??
 \end{aligned}$$

**It will take about 9.9 years.**

18. Money is invested in an account that pays interest at an annual rate of 4% compounded daily. How long will it take for the value of the account to double?

$$\begin{aligned}
 A &= P\left(1 + \frac{R}{N}\right)^{Nt} & 2P &= P\left(1 + \frac{0.04}{365}\right)^{365t} & t &= \frac{\text{Log } 2}{365\text{Log}\left(1 + \frac{0.04}{365}\right)} \approx 17.3 \\
 A &= 2P \\
 P &= P & \left(1 + \frac{0.04}{365}\right)^{365t} &= 2 \\
 R &= 0.04 \\
 N &= 365 & 365t \text{Log}\left(1 + \frac{0.04}{365}\right) &= \text{Log } 2 \\
 t &= ??
 \end{aligned}$$

**It will take about 17.3 years.**
