Precalculus Review \#2 Chapter 5 page 1
(Do not use your calculator on this page please.)
Sketch a graph of each of the following functions.

1. $y=-2 \operatorname{Sin}(3 x)-2$

2. $\mathrm{y}=0.5 \operatorname{Sin}(\pi \mathrm{x} / 2)+1.5$

## Precalculus Review \#2 Chapter 5 page 2

(Do not use your calculator on this page please.)
Sketch a graph of each of the following functions.
3. $y=-\operatorname{Cos}(2 x+1)$

4. $y=3 \operatorname{Cos}(x / 3)+3$

## Precalculus Review \#2 Chapter 5 page 3

(Do not use your calculator on this section please.)
Find the exact value of each of the following.
5. $\quad \cos (\arcsin (0.2))=$ $\qquad$
7. $\cot (\arccos (1 / 3))=$ $\qquad$
6. $\quad \tan (\arcsin (-0.6))=$ $\qquad$
8. $\sin (\arctan (2))=$ $\qquad$
(You will need to use your calculator on this section.)
Solve each of the following problems. Express solutions rounded to three significant figures.
9. A ladder that is $\mathbf{1 2}$ feet long is leaning against a vertical wall. If the ladder makes an angle of 65 degrees with the level ground, then how far is the foot of the ladder from the wall?

## Precalculus Review \#2 Chapter 5 page 4

(You will need to use your calculator on this page.)
Solve each of the following problems. Express solutions rounded to three significant figures.
10. A vertical poll that is $\mathbf{1 5}$ feet tall casts a shadow on level ground. If the shadow is $\mathbf{1 0}$ feet long, then what is the angle of elevation to the sun?
11. A simple harmonic motion is described by the function $d=-2 \cos (10 \pi t)$. What is the frequency? (Assume that the time $t$ is expressed in seconds.)
12. An airplane takes off from a runway making an angle of $12^{\circ}$ with the level ground. If the plane is moving at $\mathbf{1 5 0}$ miles per hour, then how many feet above the ground is it after 20 seconds?

## Precalculus Review \#2 Chapter 5 page 5

(You will need to use your calculator on this page.)
Solve each of the following problems. Express solutions rounded to three significant figures.
13. A passenger in an airplane flying at a height of $\mathbf{5 , 0 0 0}$ feet sees two towns directly to the left of the plane. The angles of depression to the towns are $\mathbf{2 5}^{\circ}$ and $\mathbf{7 2}^{\circ}$. How many miles apart are the towns?
14. A regular nonagon is inscribed in a circle with a 5 inch diameter. What is the length of each side of the nonagon?
